

Checkout Form

Save The Order - Front End

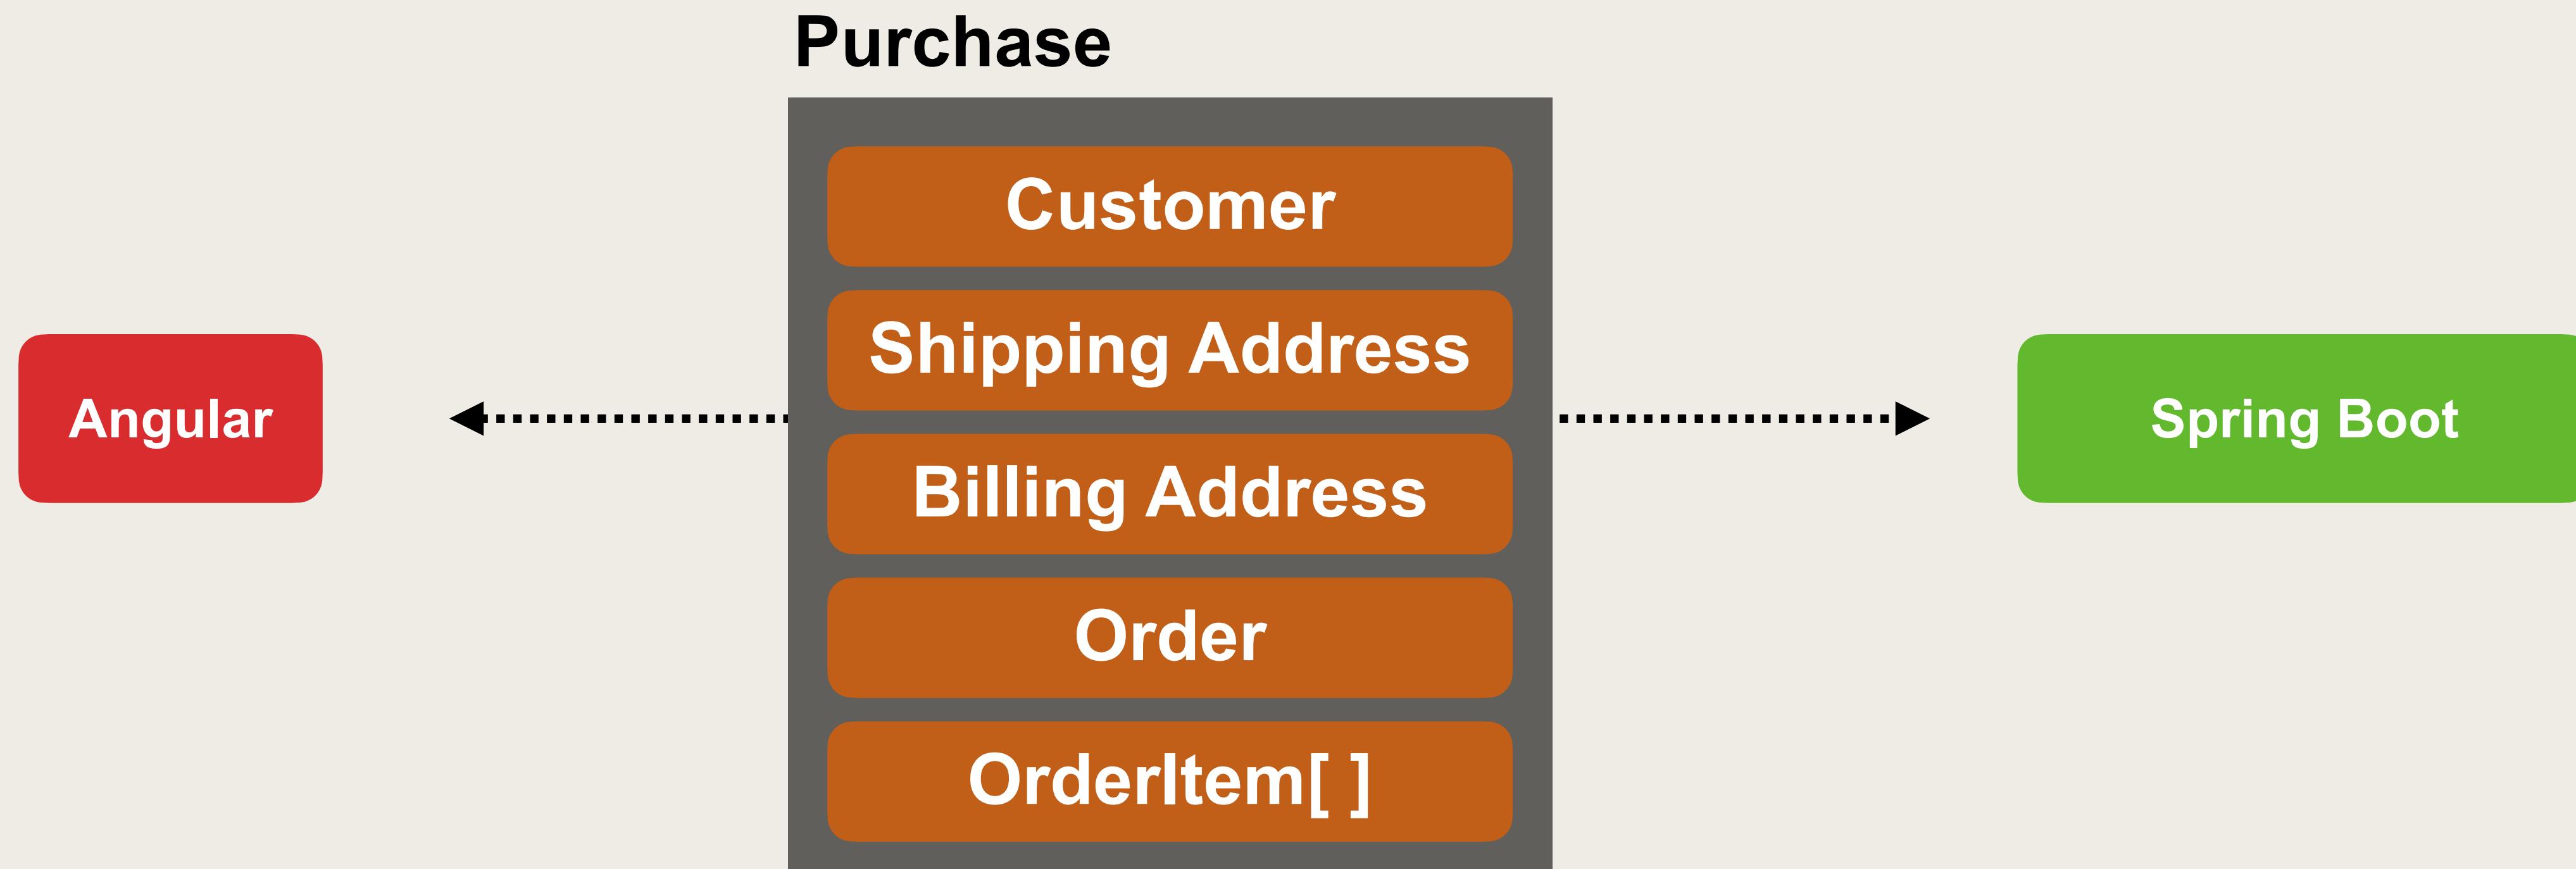

Save The Order

- The Spring Boot back-end code is up and running
- Let's focus on developing Angular front-end code

Data Transfer Object

- Data transfer between Angular front-end and Spring Boot back-end

Development Process

Step-By-Step

1. Create common classes
 1. Customer, Order, OrderItem, Address, Purchase
2. Create CheckoutService
 1. Make REST API call to Spring Boot backend
3. Update CheckoutComponent
 1. Inject CheckoutService and Router
 2. Update onSubmit() method to collect form data, call CheckoutService

Let's Write Some Code!
